

From A to B to You, the MT95 Kambur Pro in Logistics

Newland's MT95 Kambur Pro and Ndevor speed up operations for logistics company DANX

Recommended and implemented by SkanCode

The MT95 Kambur Pro was the preferred choice of DANX, one of Europe's leading in-night logistics companies.

The company specializes in night distribution of spare parts and has a guaranteed on-time delivery reliability of 99%.

Operations of such large scale involve a lot of management on multiple fronts. To reduce bottlenecks, DANX and SkanCode have entered into long-term end-to-end agreement involving 500+ MT95 Kambur Pro devices and Newland's free mobile device management software, Ndevor.

"It's a device that lives up to all our requirements and we know it comes with the updates we need in the future. And not entirely unimportant: it scans well."

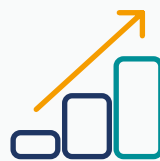

Simon Heerup Endresen, Project Manager at DANX

Challenges

- | Management bottlenecks
- | Time constraints
- | Device management too time-consuming, taking away from core business
- | Service delays
- | Decreasing customer satisfaction

Results

- | 500+ Devices
- | Time-saving: Simplified device management with Ndevor MDM
- | Cost saving: switch from a paid MDM license to a free Ndevor software.
- | Standardized up-to-date hardware across the whole company, resulting in fewer bottlenecks, faster processes, reduced time to train employees
- | Full service end-to-end agreement with device management and care solution by SkanCode

Consideration Points

- | Future-proof: powerful specs for future requirements and updates
- | User experience: light, slim design and large, clear 6.1 screen
- | Operational reliability: long battery life and screen with factory-fitted tempered glass
- | Scanning: 2D megapixel imager with laser sight that supports 1D and 2D
- | Administration: Newland's MDM tool Ndevor included
