

DRESS TO IMPRESS: THE WD2 WEARABLE SCANNER IN WAREHOUSING

The party must go on

In retail and e-commerce, digitization of processes for efficient workflow and operations starts for many at the warehouse. Located in Varberg, Sweden, gift and party supplies wholesaler Hisab/Joker AB saw a need to digitize their warehouse processes. However, there were some key considerations to keep in mind before switching systems and processes and those were speed and accuracy.

That's where Nwear, the wearable scanner line by Newland combined with our configuration software Acuscan, steps in. Recommended by our Nordics team, the WD2 Wearable Scanner with Electronic Hand Strap was the perfect solution that combines speed with efficiency, enabling Hisab/Joker AB to digitize and improve their

warehouse processes. The included electronic hand strap is designed for comfort and allows for uninterrupted work. The company now has real-time insights for inventory management, order-picking, logistics and other business operations. Because orders come in fast, and the party must go on!
