

# Working that Hind.

HealthPOS implements Newland EMEA's FM3080 Hind for secure access control at GymNation.

With an average membership of 10,000 members for every one of its ten locations, GymNation is well on its way to helping the people of UAE become healthier and fitter at an affordable price-point – and they're about to open their eleventh location this year.

With an ever-increasing membership count, it's crucial for GymNation to maintain the gym's security and to look after its members' well-being. Part of that is ensuring that only members can enter the gym via a smooth and secure access control system.

Newland EMEA's partner HealthPOS, an expert in security solutions in physical spaces with leading POS hardware, smart locks and access control technologies, provided a new, future-proof solution for access control. For this solution, HealthPOS installed 42 FM3080 Hinds connected to Gantner's GC7 controllers – with spectacular results. Get the gist of it now.

## Challenges

- | Tactile Biometrics During Covid
- | Privacy and data complications due to biometrics
- | Bottlenecks
- | Data not easily accessible for marketing automation

## Results

- | Modern future-proof access control solution
- | Fewer bottlenecks – up to 14701 scans on the busiest day
- | Greater app adoption
- | Real-time data
- | Faster member enrollment

## Consideration Points

- | Optimized for reading barcodes on mobile screens
- | IR and light sensors
- | Coating to reduce reflection and glare
- | Plug & play integration
- | Small form factor
