

Newland AIDC

SCANNING MADE SIMPLE

2.0

EasySet, Newland's Master Configuration Software, is getting an update!

Manage all your scanners, scan engines, and UHF reader with one software.

Plug-and-Play Detection

Instantly retrieves info from connected or networked scanners.

Live Settings

Quickly adjust lightning, focus, and more while viewing the camera feed.

Live Testing

Immediately test changes without saving and re-scanning.

Built-in Diagnostics & Help

Instantly access built-in reference, logs, and a live console for troubleshooting

AI Vision Support

Automatically enables AI-powered visual inspection, OCR, and configurable workflows.

Standards & Updates

Seamlessly configure GS1 Digital Link scanners and supports new models and features.

Explore EasySet 2.0

Simplify your device configuration!

What's New?

With version 2.0 of Newland's configuration software, you can now set up and manage all your handheld scanners, fixed-mount scanners, OEM scan engines, and UHF reader using a single application. This Windows software, a successor to the original EasySet, features a modern and streamlined interface.

Existing EasySet users can easily make the switch to EasySet 2.0, with support for both newly purchased devices and compatible devices already deployed in the field.
